**Objective:** Seeking a job as a Junior Web Page Developer.

## Work Experience

---

### **The Iron Yard**

September 2016 – December 2016

At The Iron Yard I was a student as a Back-End Engineer. For 12 weeks, I learned Python, HTML, CSS and JavaScript. I completed the daily projects and the big projects every weekend. I learned how to develop the skills in those languages and, more importantly, develop the tools to learn new languages on my own. For the final three weeks I was assigned a final project where I used all the skills I learned before to build my own web application.

### **REMA USA**

July 2015 – July 2016

#### **Assembler**

As an assembler, my main task was to build electric vehicle car chargers for users to have at their house or place of work. I worked as a member of a team designed to make these chargers, in an assembly line. I followed the blueprints to successfully assemble the charger. My job was to build and test the chargers that we built throughout the week and to make sure that they worked. If they did not operate, then I located the problem and fixed the charger to make it operational.

### **Presort Plus, Inc.**

June 2012 - July 2015

#### **Warehouse Worker**

As a warehouse worker my primary duties were to meter business' mail and then sort them by zip code. I would also assist others around the warehouse to help them finish other jobs that needed to be done. These jobs include inserting some companies mail or printing out the address on envelopes.

## Education

---

### **The Iron Yard, Greenville South Carolina**

September 2016-December 2016

Back-End Engineering, Certificate

### **Greenville Technical College-Barton Campus, Greenville, South Carolina**
